Turntable Shipping Box With Protective Padding

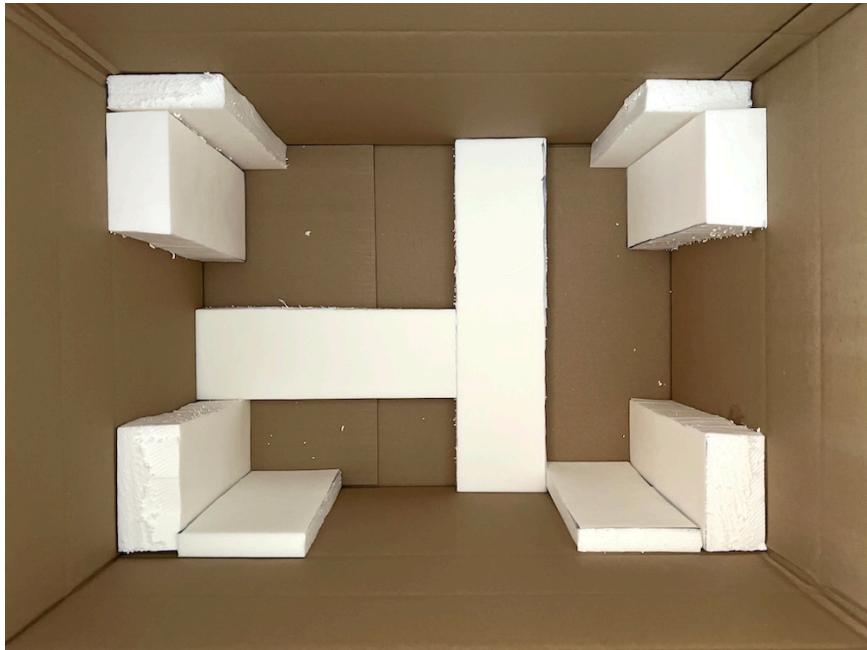

Sturdy shipping box with special protective padding made of PE / Ethafoam for Technics SL-1200 / SL-1210 MK2–MK5 turntables. Enables safe shipping of the turntable. Dust cover can be optionally included.

Packaging Instructions

The most important aspect of packaging is protecting the tonearm. Although the Technics SL-1210 turntable is heavy, most of the weight comes from the damping and the housing itself.

Remove the turntable platter. To do this, insert your fingers into the two openings of the platter and pull it firmly upwards. In some cases, the platter may sit very tightly; in that case, you can leave it mounted.

Also, unscrew the tonearm counterweight and place the turntable in the shipping box on the first foam layer.

The turntable platter is secured in the second foam layer. Additionally, you can fasten it to the foam layer with tape.

Insert the tonearm counterweight into the designated hole of the third foam layer.

If a dust cover is available, place it on the third foam layer as well.

Then place the fourth foam as the topmost layer.

Finally, close the box and seal it carefully with tape.

Manufacturer

Ilia Frolov - PhonoPhönix

Disclaimer

The shipping box, including protective padding, is intended solely as a packaging aid for the shipment of turntables. No liability is assumed for damage to the device that occurs during transport.

Proper packaging of the turntable is the responsibility of the customer. We strongly recommend shipping exclusively via an insured and trackable shipping service.
