# PhonoPhönix
RCA Connection Module

RCA connection module with ground terminal and internal ground switching for Technics SL 1200 / 1210 MK2–MK5 turntables.

Makes the Technics even more compact and allows the connection of any RCA cable. A discreet button can be used to activate the internal ground mode, so that no separate ground wire is required.

Fits perfectly to the Technics tonearm and can be secured using the original screws. Delivered fully soldered on a custom-made printed circuit board, which can be installed in place of the original PCB without difficulty. Only basic soldering skills are required to connect the tonearm leads.

Designed and assembled in Germany. The connection module features a robust, durable aluminium housing, Neutrik panel-mount RCA connectors and high-quality electronic components.

The tonearm is not included in the scope of delivery.

Product Information

Product Name

RCA connection module with ground terminal and optional internal ground mode for Technics SL 1200 / 1210 MK2–MK5 turntables

Product Type

Passive audio spare part (without active electronics)

Description

This product replaces the original RCA and ground cables of Technics SL-1200 / SL-1210 MK2 – MK5 turntables.
It allows the connection of any RCA cable and optionally provides an internal ground mode, in which no separate ground wire is required.

Electric Characteristics

Purely passive component, no power supply required.
Processes audio signals only in the millivolt range.
The product is not a standalone electrical device, but a passive connection module intended for internal installation.

Technical Characteristics

Connection: 2 × RCA/Cinch Neutrik Connectors
Ground: External ground connection screw
Button: Activates an internal ground mode, when GND is connected to the R-
Body: Aluminium

Compatibility

Original tonearm of the Technics SL-1200 / SL-1210 MK2 – MK5 turntables
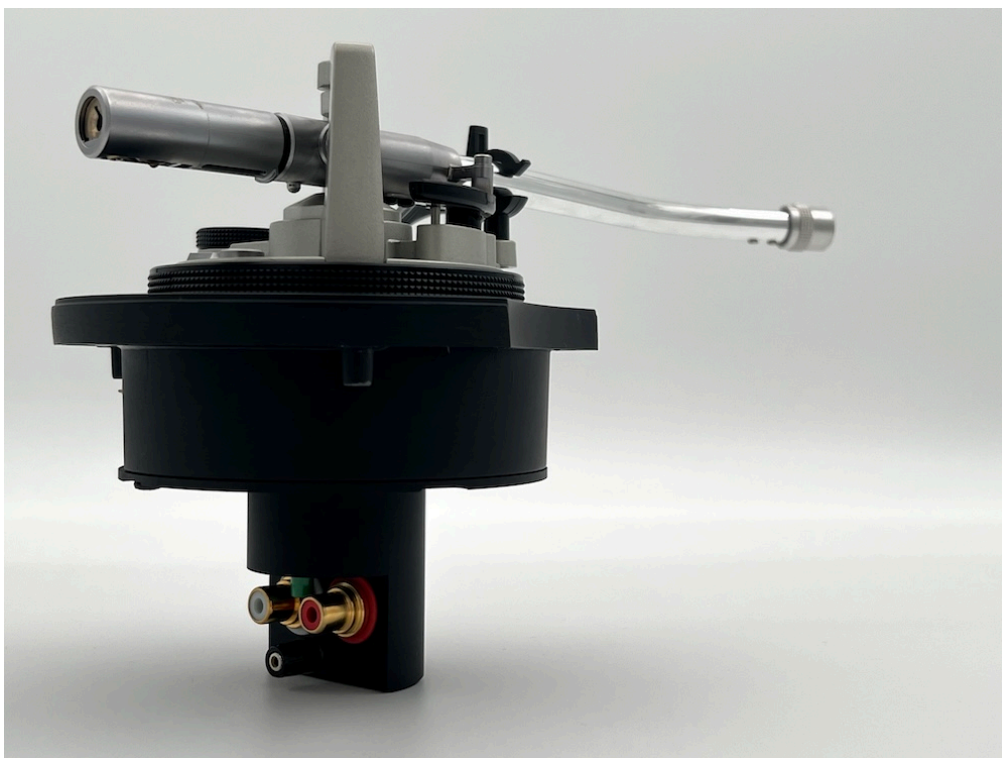

Package Contents

1 × assembled RCA Connection Module
(Without Tonearm, without Cinch-cable)

Installation

The printed circuit board is designed to fit precisely in place of the original PCB.
Basic soldering skills are required to connect the tonearm leads.

The connection module is secured to the underside of the tonearm using the original screws.
